If you are worried about security, you can change the phpMyAdmin URL to something else like your-domain/secret-path You can also prevent unauthorized access to the login page by implementing password authentication in Nginx.. You should change your software sources in /etc/apt/sources list file I encountered this bug once.

A LEMP software stack is a group of open source software that is typically installed together to enable a server to host dynamic websites and web apps.. You can also follow us on, It's a file in /etc/nginx/snippets, which comes with Nginx installed from Ubuntu repository.. This topic will take you through a step by step installation process for building a complete Web environment platform with LEMP (Linux Nginx, MySQL/MariaDB, PHP-FPM/PhpMyadmin), and with the help on USE flags provided by Portage Package Management, which offers a set of package functionality on compilation process – modules or settings needed for a web platform, will highly.
